Project Name	Predictive Pulse: Hypertension Detection System
Maximum Marks	4 Marks

THINK & FEEL	**SEE**
• Worried about long-term health • Fear of heart disease • Concerned about lifestyle habits • Unsure about severity of condition	• Online health articles • Medical reports with complex data • Other patients managing BP • Healthcare apps and devices
HEAR	**SAY & DO**
• Doctor’s advice to monitor BP • Family suggesting lifestyle change • Media highlighting health risks	• Checks BP occasionally • Searches symptoms online • Takes medication irregularly • Visits doctor during complications
PAIN	**GAIN**
• Difficulty understanding reports • Anxiety about complications • Irregular monitoring habits • Fear of medical emergencies	• Clear risk classification • Easy-to-understand recommendations • Better health awareness • Early detection & prevention

Enhanced Empathy Map – Predictive Pulse

Predictive Pulse: AI-Powered Hypertension Detection

What does he THINK AND FEEL?

- Worry about long-term managing conditions like time since diagnosis, medication adherence.
- Aspiration for an easy and accurate way to understand cardiovascular risk.
- Preoccupation about high-risk results, such as "Critical – Immediate Medical Attention Required".

What does he HEAR?

- Personalized advice: "Maintain a heart-healthy diet" or "Is healthy diet" or "Consult a doctor immediately".
- The system is an "AI-Powered platform" analyzing cardiovascular risk factors [cite: 1].
- A clear message: "EMERGENCY: Please contact a doctor or visit an ER immediately" for critical results.

USER

What does he SEE?

- Anvironnination:
- Data visualization charts showing personal health analytics [cite: 2].
- A list of input fields for Age, Gender, Symptoms, BP readings, Medication to get an assessment [cite: 2].
- A clear and detailed list of color-coded risk alerts and the "EMERGENCY" message for high risk states.

What does he SAY AND DO?

- SAY/DO (Post-result): Follow output advice (e.g., diet or consult a doctor immediately).
- DO: Generate a personalized risk assessment.
- DO: Correct and accurate enter of personal medical data (Age, Gender, History, Symptoms, BP readings) into the form [cite: 2].

Pain

- A feeling of high symptom severity.
- Fears of a "Critical" risk classification or an actual hypertensive crisis.
- Confusion about how complex factors (Age, Family History, etc.) correlate to their overall risk level.

Gain

- A clear classification of their predicted health stage.
- To receive a "Low Risk" result from a heart-healthy diet or consulting a doctor for immediate medical attention, potentially leading to normal readings in the future.
- Success measures: receiving medical grade risk assessment, clinical guideline compliance, personalized recommendations, professional medical support.
